

Medical • Environment • Reproduction Research Organization(MERRO)

Socialist Republic of Vietnam
MERRO Scholarship for Hanoi Medical University.

The MERRO Scholarship presentation ceremony.

Medical Environment Reproduction Research Organization (MERRO) is
aiming to develop global and young leaders who are responsible for the next generation.

I would like to refer to the word of Dr. Donella H. Meadows.

What makes people happy is to meet five elements.

First, have not to leave their country due to the loss of clean air and soil.

Second, have not to leave their country due to disaster and/or war.

Third, can be received basic medical treatment including preventive care.

Fourth, can receive basic schooling

Fifth, be proud of traditional culture and enjoy it.

In order to realize people's happiness, we MERRO consider that all children of the world should be provided stable supply of food, clothing and housing as well as health care and education.

For realization of this philosophy, MERRO has established MERRO-FUNDS which gains the cooperation of "International Academy of Innovative Biology Medicine and Engineering", "International Academy of Innovative Education and Culture Art", and "International Harmonization Club"

I believe that MERRO has contributed to global peace and happiness.

From bottom of our hearts, we expect you will be a excellent medical professional and take a leadership to open medical frontiers. Furthermore, I hope you will play an important role for the development of medical care in Asean region.

It is our pleasure if this opportunity encourages you for the sake of your future.
